

Oil Refining in Africa

The authoritative reference publication on the refining industry in Africa

Published annually, this 108-page report is essential reading for anyone interested in how Africa's refining industry has been affected by the unique challenges of the last three years, and what to expect from the momentous changes coming over the next few years

Key features:

- Detailed information on each of the operating refineries in the region including:
 - History
 - Technical configuration
 - Ownership
 - Local markets
 - Economics
 - Future plans
- Analysis of all refineries currently operating in Africa, stating their capacity and level of complexity.
- A review of refinery operations through 2022 and analysis of how regulatory changes and the effects of major changes in the African refining sector will affect operations through 2023 and beyond
- Product-by-product balances, detailing the role of refinery supply in meeting local demand.
- Analysis of the effects major refining projects such as Dangote will have on refining across the continent
